Re: Junior Software Engineer

Dear Jill Charlton,

I am an aspiring software developer interested in the Junior Software Engineer Co-op position at Tasktop Technologies. I would love to offer my skills and abilities to a company that emphasizes teamwork, openness, professional development and a healthy work-life balance. The BCIT curriculum has strongly rooted me in the fundamentals of testing, object-orientated design and test-driven design. I offer an in-depth understanding of JavaScript and have created several personal and academic projects to further my understanding of the programming language.

These projects are outlined my resume and I explore self-taught concepts such as collision detection between objects, particles, read/write to database (call backs) and data persistence with JSON. Furthermore, I am currently working through an Udemy course on sorting/searching algorithms and data structures to improve the efficiency of the code I design.

In addition to my programming abilities, I have engaged in Agile development methods during team projects. The Agile Method is heavily emphasized at BCIT and consequently, I have adapted to employing Agile ideologies in my design. The success of my team at the 2019 Co-op Hackathon was largely due to the team's willingness to participate and communicate in hourly scrums, updating the team on issues, successes and improvements. As a result, my team's product landed first place at the event.

I am very excited to explore potential opportunities with Tasktop, and I hope to share my talents and enthusiasm with your company. Thank you for your time reviewing my application and I look forward to hearing from you.

Sincerely,

Kevin Mark.
