Re: IT Systems Integrator Co-Op

Dear Angela Kuong,

I would love to be part of an organization that is diverse and emphasizes teamwork and passion towards their work. The BCIT curriculum has strongly rooted me in the fundamentals of testing, object-orientated design and test-driven design. I offer an in-depth understanding of Java, JavaScript and Python. In addition, my honors thesis required exceptional time management, and my former position as a quality control analyst demonstrates my excellent teamwork capabilities and technical writing skills.

My projects are showcased on my resume and I explore self-taught concepts such as collision detection between objects, creating particle animations, reading/writing to database (call back functions) and data persistence with JSON. These were all learned through an OOP approach on various operating systems (Windows, Linux and MacOS via VMWare). In addition, I am currently self-learning search/sort algorithms and data structures through an online Udemy course, to improve the efficiency of the code I design.

By the start of the Co-op session, BCIT will cover relational databases, SQL, Apache and hardware and infrastructure models in detail.

I am very excited to explore potential opportunities with the Ritchie Bros. Auctioneers, and I hope to share my talents and enthusiasm with your company. Thank you for your time reviewing my application and I look forward to hearing from you.

Sincerely,

Kevin Mark.
